JOSH ESCOBAR

LINUX SYSTEMS AND INFRASTRUCTURE ENGINEER

Austin, TX | linkedin.com/in/joshescobarx | greycarpet.github.io

PROFESSIONAL SUMMARY

Hands-on infrastructure professional and U.S. Coast Guard veteran focused on Linux administration, networking, automation, and production support. Delivered Linux migrations, improved VoIP reliability, and automated business reporting. Seeking individual contributor opportunities in Linux systems administration and infrastructure engineering.

TECHNICAL SKILLS

Systems: Ubuntu, Lubuntu, openSUSE/ViciBox, systemd, SSH, Samba, LUKS, ext4, Linux permissions

Networking and security: TCP/IP, DNS, WireGuard, firewalls, Fail2ban, packet capture, TLS/SRTP

Operations: Grafana, Prometheus, Uptime Kuma, Asterisk, VICIdial, Windows endpoints, Active Directory fundamentals

Automation: Basic Bash and SQL; AI-assisted Ansible, Python automation, PowerShell, and Docker Compose configuration

Certifications: CompTIA A+, Network+, Linux+

PROFESSIONAL EXPERIENCE

ECA Direct, Inc. | Austin, TX October 2023–Present

Director of Information Technology November 2025–Present

Technical owner for approximately 50 employees, 200,000–250,000 monthly call minutes, and approximately 25 agents at peak production concurrency.

- Migrated approximately 300 GB of sensitive client data to Ubuntu/Samba with LUKS encryption and rebuilt access controls, with no operating-hours disruption for six users.
- Automated reporting across 32 campaigns and delivered a self-service platform using AI-assisted development, reducing estimated weekly effort from eight staff hours to 30 minutes.
- Migrated telephony from VPS to VDS without agent disruption; reported voice-quality complaints fell from 3–5 per week to zero following the March 2026 cutover.
- Used Grafana/Prometheus alerts to identify and contain unauthorized cryptomining; preserved evidence, revoked compromised access, and hardened SSH with no production downtime.
- Corrected IVR routing and queue timeouts, reducing affected toll-free inbound charges by 74% and saving $923.56 in the following billing cycle.

Information Technology Support Specialist October 2023–November 2025

- Migrated approximately 50 aging Windows workstations to Lubuntu over a weekend, returning the fleet to service by the next business day with limited hardware upgrades.
- Standardized applications and endpoint security through AI-assisted Ansible development; estimated provisioning time fell from 1–2 hours to about 10 minutes per workstation.
- Contained an unauthorized-calling incident using Firewalld, Fail2ban, SSH restrictions, and credential rotation; authored the root-cause analysis.

Information Systems Technician | United States Coast Guard December 2019–December 2021

- Supported approximately 60+ users across Windows, Active Directory, classified and unclassified accounts, endpoint support, and authentication devices.
- Assisted a senior administrator with a Windows Server 2012-to-2016 domain controller upgrade, completing installation and validation within a one-hour maintenance window.
- Installed and configured a Red Hat-based Minotaur HUB, including operating system, networking, and application configuration.

EDUCATION

Network Engineer Program | CyberTex Institute of Technology — Expected February 2027

B.S., User Experience | Full Sail University — 2024
