Josh Escobar

Linux Infrastructure & Network Engineering

Austin, Texas | U.S. Coast Guard veteran
greycarpet.github.io | github.com/greycarpet

Hands-on IT leader and infrastructure engineer focused on Linux systems, secure network operations, telephony, and practical automation. Experience spans end-user support, production administration, business-rule discovery, and controlled technical change.

PROFESSIONAL EXPERIENCE

Director of Information Technology

ECA Direct - Austin, TX | Nov 2025 - Present

- Administer Linux production services, Asterisk/VICIdial telephony, networking, remote access, file services, and operational systems supporting customer-facing campaigns.
- Designed and rolled out a production Twilio connection using TLS signaling and SRTP media after a controlled Linux/PJSIP verification pilot.
- Developed and validated Python/SQL reporting automation; estimated about 20 staff hours saved weekly and approximately 90% fewer reporting errors in recurring client deliverables.
- Directed the transition to remote operations using Linux-hosted services, WireGuard connectivity, controlled file access, and remote-support workflows.
- Corrected an after-hours IVR/queue behavior; affected toll-free charges declined 74% in the next full billing cycle.

Lead IT Support Specialist

ECA Direct - Austin, TX | Oct 2023 - Nov 2025

- Supported workstation provisioning, employee onboarding/offboarding, access controls, and production troubleshooting across Linux and Windows systems.
- Migrated 50 aging workstations to a standardized Lubuntu configuration and built Ansible playbooks and checks to reduce repeated setup work.
- Helped restore centralized identity and file access with Ubuntu/Samba Active Directory and separate network storage following a server failure.

Information Systems Technician

United States Coast Guard | Dec 2019 - Dec 2021

- Supported 60+ personnel using Windows workstations, Active Directory, devices, printers, and secure information systems.
- Managed account onboarding, access validation, equipment preparation, and incident support; contributed to an operational Minotaur HUB node and emergency IT readiness.

Fireman

United States Coast Guard | Nov 2017 - Dec 2019

- Served in maritime operations and maintenance, developing safety discipline, procedural rigor, and operational accountability before moving into information systems.

TECHNICAL SKILLS

Linux & systems
Ubuntu, openSUSE, Lubuntu, systemd, SSH, package management, Samba, Linux permissions, storage and services.

Networking & telephony
TCP/IP, DNS, routing, WireGuard VPN, firewalls, Asterisk, VICIdial, SIP, TLS, SRTP and Twilio.

Automation & data
Ansible, Python, SQL, Git, YAML, reporting workflows, configuration validation and operational scripts.

Infrastructure operations
Docker Compose, PostgreSQL, Redis, Nginx, SFTPGo, monitoring, incident investigation, documentation and change control.

SELECTED ENGINEERING WORK

Production voice trunk encryption

Validated certificate trust, resolved PJSIP/VICIdial transport behavior, verified negotiated encrypted audio on an answered call, and rolled the secure Twilio trunk into production.

greycarpet.github.io/projects/secure-voice-trunk/

Linux endpoint configuration

Standardized 50 Lubuntu workstations using documented installation and Ansible-based provisioning. Validated a clean-install rebuild before fleet application.

greycarpet.github.io/projects/ansible-linux-deployment/

Reporting workflow automation

Translated manual reporting rules into reusable Python/SQL processes for cleaning, validation, calculations and deliverables; evolved the tooling into a Linux-hosted reporting application.

greycarpet.github.io/projects/reporting-hub/

EDUCATION & CERTIFICATIONS

CompTIA A+ | Network+ | Linux+
Professional certifications

Network Engineering Program
CyberTex Institute of Technology | In progress, expected February 2027

Bachelor of Science, User Experience
Full Sail University | Completed November 2024

PUBLIC PORTFOLIO

Read the project narratives for engineering decisions, validation evidence and the scope of reported outcomes. Weekly time savings and error reduction are estimates; the 74% reduction applies to the affected toll-free expense.
